

Preservation and Storage

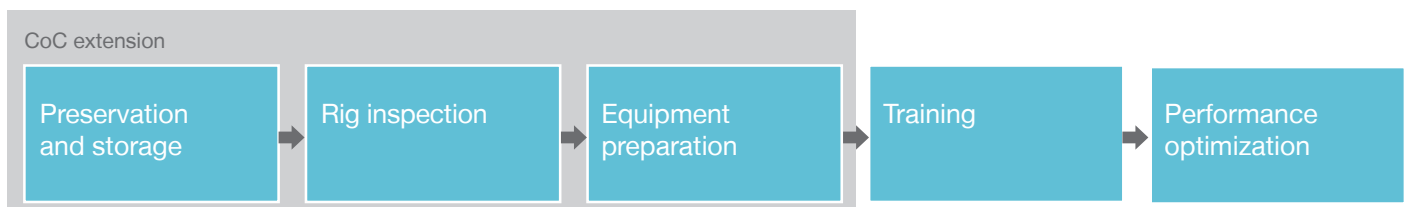

Our safe, efficient and economic preservation and storage services ensures a documented condition of the equipment to safeguard quality and prevent loss of property.

Equipment stored and preserved by MHWirth as an Original Equipment Manufacturer (OEM) may qualify for an extension of its Certificate of Completion (CoC), in combination with inspection and equipment preparation. Additionally, uptime and lifetime of the equipment can be prolonged.

Our preservation and storage maintenance services have a strong focus on drilling equipment temporarily out of service. Detailed activities can be adjusted to your specific equipment.

We follow our OEM preservation procedures and our services meet the DNV GL class guideline CG-0290.

Benefits

- Rig preservation and storage according to OEM guidelines contribute towards qualifying your equipment for an extension of its Certificate of Compliance (CoC)
- You can extend the lifetime of your equipment
- Detailed documentation allows for predictable and cost effective reactivation of equipment
- The OEM documented condition of equipment is a competitive advantage for new drilling contracts
